

Data Appendix

The dataset was pulled from the Labeled Information Library of Alexandria: Biology and Conservation. We didn't need to clean the dataset because it was already clean, with no missing values.

The images are in folders named part1/, part2/, part3/, and part4. They don't have data columns, so they don't have a data dictionary.

The image labels are contained in nacti_metadata.csv, which does have data columns. The data dictionary of nacti_metadata.csv is below:

Column Name	Description	Potential Response
id	Unique identifier for the image, typically the image's actual filename	2010_Unit150_Ivan097_img0023.jpg
filename	The full path, including the directory and subdirectory in which the file is located	part0/sub000/2010_Unit150_Ivan097_img0002.jpg
study	The research study or project associated with the image	CPW
location	Camera trap site identifier, often including the region, year, unit, and Camera ID	San Juan Mntns, Colorado
width	Width of the image in pixels	2048
height	Height of the image in pixels	1536
category_id	This identification number corresponds to the specific animal's full taxonomy	28
name	The scientific name of the animal	Cervus elaphus
genus	The genus classification of the animal	Cervus
family	The family classification of the animal	Cervidae

order	The order classification of the animal	Artiodactyla
class	The class classification of the animal	mammalia
common_name	The common name these animals are referred by.	Red deer
