

Data Appendix

The dataset was pulled from the Labeled Information Library of Alexandria: Biology and Conservation. We didn't need to clean the dataset because it was already clean, with no missing values.

The data dictionary is below:

Column Name	Description
id	Unique identifier for the image, typically the image's actual filename
filename	The full path, including the directory and subdirectory in which the file is located
study	The research study or project associated with the image
location	Camera trap site identifier, often including the region, year, unit, and Camera ID
width	Width of the image in pixels
